- Standard bank ■ Novartis ■
- Telkom ■ Fidelity

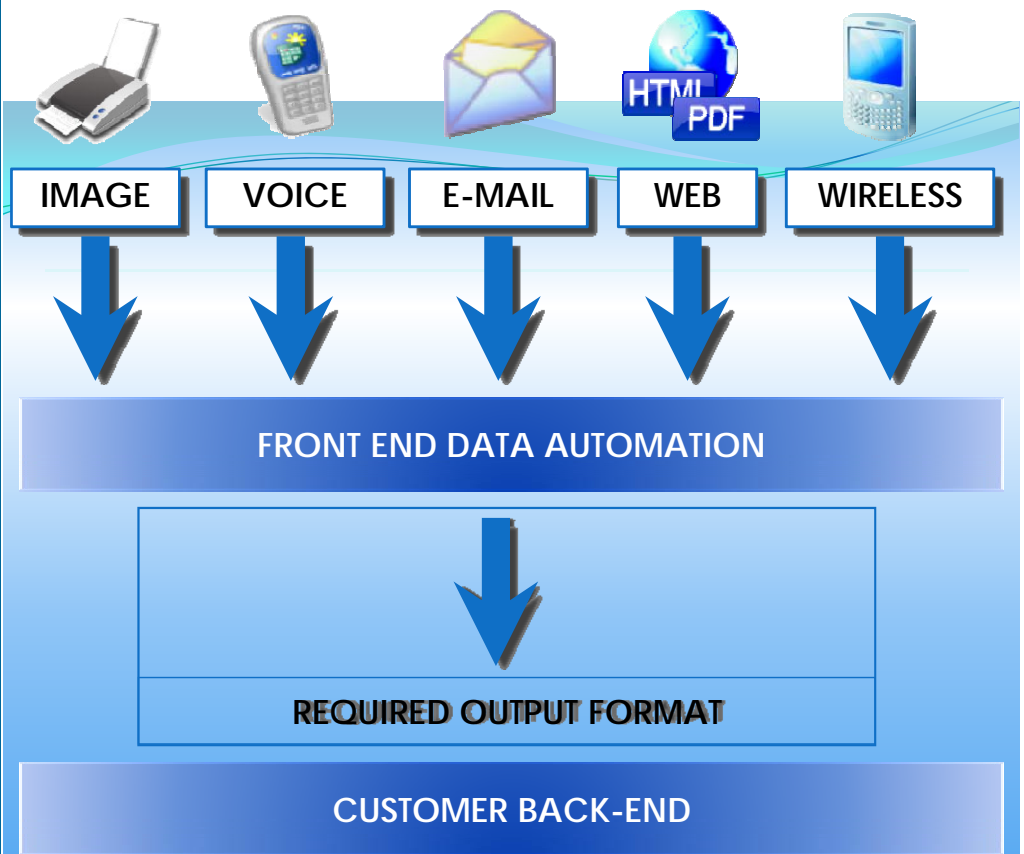

Focus Solutions focus on providing Enterprise Software solutions that are focused solely on automating all the mission critical data collection activities of large corporations. We recognize the need corporations have to collect data from customers and business partners in an automated, timely, correct and choice based manner. Our software solutions allow Enterprises to collect data through a wide variety of highly automated interfaces which includes the Web, Imaging, E-mail, Wireless and Voice/Telephony inputs.

Customers can choose the method with which they are technologically comfortable and submit their information either by way of paper (fax), as email, by way of a Web page or telephonically. Regardless of the medium which the customer chooses, the Enterprise ends up receiving correct data (E.g. Credit application, Healthcare Claim, Membership enrollment, Invoice etc.) in a highly automated and cost effective fashion, with absolute minimal manual user intervention required.

INTERFACE AGNOSTIC FRONT END DATA AUTOMATION

Once data has been extracted and validated, data delivery takes place to the Enterprise back-end environment. In the same way that our solutions are front-end agnostic, they are also back-end agnostic.

This means that we consider it our responsibility to deliver data to the designated system in the required format. Whether this delivery system is a CRM, ERP, Workflow or proprietary customer system. **Solutions are not complete until, complete and secure data delivery has taken place.**

SEAMLESS DATA DELIVERY TO ANY BACKEND SYSTEM
